The mosquito control program has now ceased field operations for the 2020 season. Personnel are now repairing and maintaining equipment, mapping new sites, clearing trails, securing access permission from new landowners, and adjusting site maps and flight plans to improve drone operations. Between August 14th and 31st, mosquito control personnel conducted 417 inspections, and applied 29 larvicide treatments, over an area of 37.8 acres. No adulticide treatments were applied. To date, we have detected no positive pools for West Nile Virus, and none have been reported statewide.

During the 2020 season, mosquito control personnel conducted 7,403 inspections, applied 970 larvicide treatments covering 1,741.15 acres, and applied 16 adulticide treatments, covering 266.52 acres.

Thank you,

Jake Rubow
